

In-Season-ReDesign

11.18.2020

Leo Manzo

Team: LAN Bandits

School: CodeStack Academy Lvl 1

Overview

Ajay and I teamed up to work together on project 4 which was a business website re-development assignment. The site we decided to redesign was a local Market/Nursery in Stockton by the name of In-Season.

Goals

- Find a website that we both agreed needed a redesign.
- Split up the work evenly, make sure we both understand how to do our parts.
- Make the finished product look/perform better than the business's current site.

Specifications

To start our project, Ajay and myself first started working on a prototype on Adobe XD. Once our prototype was built and we got it approved, we split the work accordingly: Ajay took responsibility for the About page while I did all of the work for the Home page. I also took the liberty of building the navs/footers so we wouldn't have any repeating files on GitHub. From there, we constantly pushed all of our updates to GitHub so we could both stay updated with each other's progress.

Milestones

- Built XD prototype together
- Connected both parts of the project to GitHub
- Uploaded finished product to Microsoft Azure/Live Link

Overview

Overall, I personally believe Ajay and I did an incredible job on this project. We both had a constant agreement on most subjects and if there ever was a disagreement on how something should look or perform, it was a smooth process to figure out what we both wanted instead of fighting about it. In this project, I took more of a lead and established progressive ideas/points for both the front+back-end that Ajay always found helpful. Ajay himself took charge in setting up meetings, looking for bugs, and making sure we stayed on a good pace to finish on time. Some adjustments we had to make were all in the website design itself, there were a few aspects in the prototype that we weren't able to do (ex: logo hanging over bottom of nav) or that we thought would look better (ex: About page was practically a copy and paste of Home, we added that info to the Home page instead and added "Local Provider" info on the About Page instead). Our website redesign was a fluid experience with very few hiccups and I believe our final product looks better than In-Season's current site. I give Ajay a 9/10 as a partner and would very much work with him again in the near future.
